

# Project U: The campaign against illegal human augmentation

For over 150 years, groups around the world have been developing technologies that allow human beings to perform beyond their natural capability. We now live amongst countless individuals who have been covertly & unnaturally altered in ways which grant them increased strength, agility, and cognitive ability.

There are a wide variety of techniques and technologies in use including stem cell treatments that enhance brain function, direct gene editing, blood transfusions, biological implants, and neural interface technology. Treatments which are typically used on very young children, far too young to understand what was being done to them.

Whilst some of these individuals do go on to achieve great success and fame in life, there are many others who are far less fortunate, suffering greatly from numerous possible negative effects which include autism spectrum disorders, schizophrenia, gender dysphoria, physical deformities, and fits of rage bringing misery to not only them but those around them.

Humanity is being literally transformed around us by a small yet powerful minority and nobody bothered to ask our permission. If you have a problem with this, please join us and help stop us going any further down this dark road. At the very least we ask you to know read full story and understand all the issues at play. This is a scandal that directly or indirectly affects us *all*.
